

2026 ASCE Utah FRESH FACE OF THE YEAR

EMILY TULSKY, P.E.
CONTECH ENGINEERED SOLUTIONS

“Emily seeks to improve water quality standards, find solutions to groundwater recharge, and enrich the ecosystems where her projects take her. Her continuous presence in professional communities is driven by her dogged pursuit of improved storm water treatment practices.”

2026 ASCE Utah FRESH FACE OF ENGINEERING

“Emily has served the last year as the Event Coordinator for the ASCE Utah Younger Member Forum on top of multiple professional society assignments and a demanding work travel schedule. Many of the best-attended YMF events from the last year were due directly to her efforts planning and promoting the chapter at a time when participation is inconsistent. Despite being new to ASCE and not having a leadership title in the forum, she is a galvanizing and guiding force for the entire team on planning calls and at all activities.

In every corner of the engineering community, she is there. I have personally seen her engaged at ASCE, UFSMA, and SLCo Watershed Council events; and I know she invests additional volunteer hours at other community activities. Her continuous presence is driven by her dogged pursuit of improved stormwater treatment practices.

Emily stands for the highest professional and technical standards ASCE exemplifies. She is actively engaged in conversations to push the envelope of water quality standards, find solutions to groundwater recharge, and support the water community in its newly emphasized goals of supporting the connecting ecosystems. As a representative of Contech, she is curious about innovative processes and seeks to spread intentional and tailored approaches to the intermountain area.

She is dedicated to ASCE and the engineering community, engaged in advancing the profession, and deeply passionate about the work she does.”
